# Professional Summary

---

I'm Achmad Yusuf, a Senior Software Engineer with 13+ years building reliable Java backend systems. I also work full-stack with React, Next.js, and NestJS. AWS Certified, experienced in event-driven architectures using Kafka. Recently focused on production observability with Kibana and CloudWatch to optimize performance, reliability, and scalability across financial, enterprise, and platform systems.

# Experience

## Senior Software Engineer in Mitrais

- Led migration of critical legacy systems from Cobol to Java-based microservices
- Developed and maintained RESTful APIs
- Collaborated with global stakeholders across engineering, QA, and product teams
- Improved system reliability, performance, and maintainability in high-traffic environments
- Overseas Client from Australia and Japan

## Software Fullstack Developer in Syntesis

- Built scalable backend services and APIs using Spring Boot and Hibernate for financial institutions
- Designed system architecture, data models, and business processes
- Implemented Agile Scrum practices, sprint planning, and backlog management
- Delivered secure and compliant banking middleware solutions
- Lead Internal Product Development Team

# Commerce

## Reuse Luxury Brand - JBK

Client : Japan, Indonesia  
Project Duration : 6-9 Months

### Overview:

Create and publish a Mobile App using Flutter for reuse luxury brand. It contains a sell and purchase feature, including a point system for every transaction. It also has a delivery method option for selling reuse luxury item to the system

# Banking

## Mobile Banking System

---

Engineered middleware that bridges mobile apps with core banking. Using Java and RabbitMQ, I built scalable pipelines to transform modern JSON requests into ISO 8583 messages, ensuring high-speed, asynchronous transaction processing and seamless interoperability between digital interfaces and legacy financial systems.

# Inventory

## Inventory System

Features included in this application include:

- Work Orders for maintenance
- Inbound/Outbound goods transported from the port to the site/plant
- Permit to Work Management
- Master Inventory
- Dashboard

Dashboard - Pojok IMS

Metric	Value
Total Material	192
Total Stock	99,407
Total Material Masuk	157
Total Surat Jalan	398

Quick Actions

- + Tambah Material
- Import Excel
- Refresh Data
- Export Excel

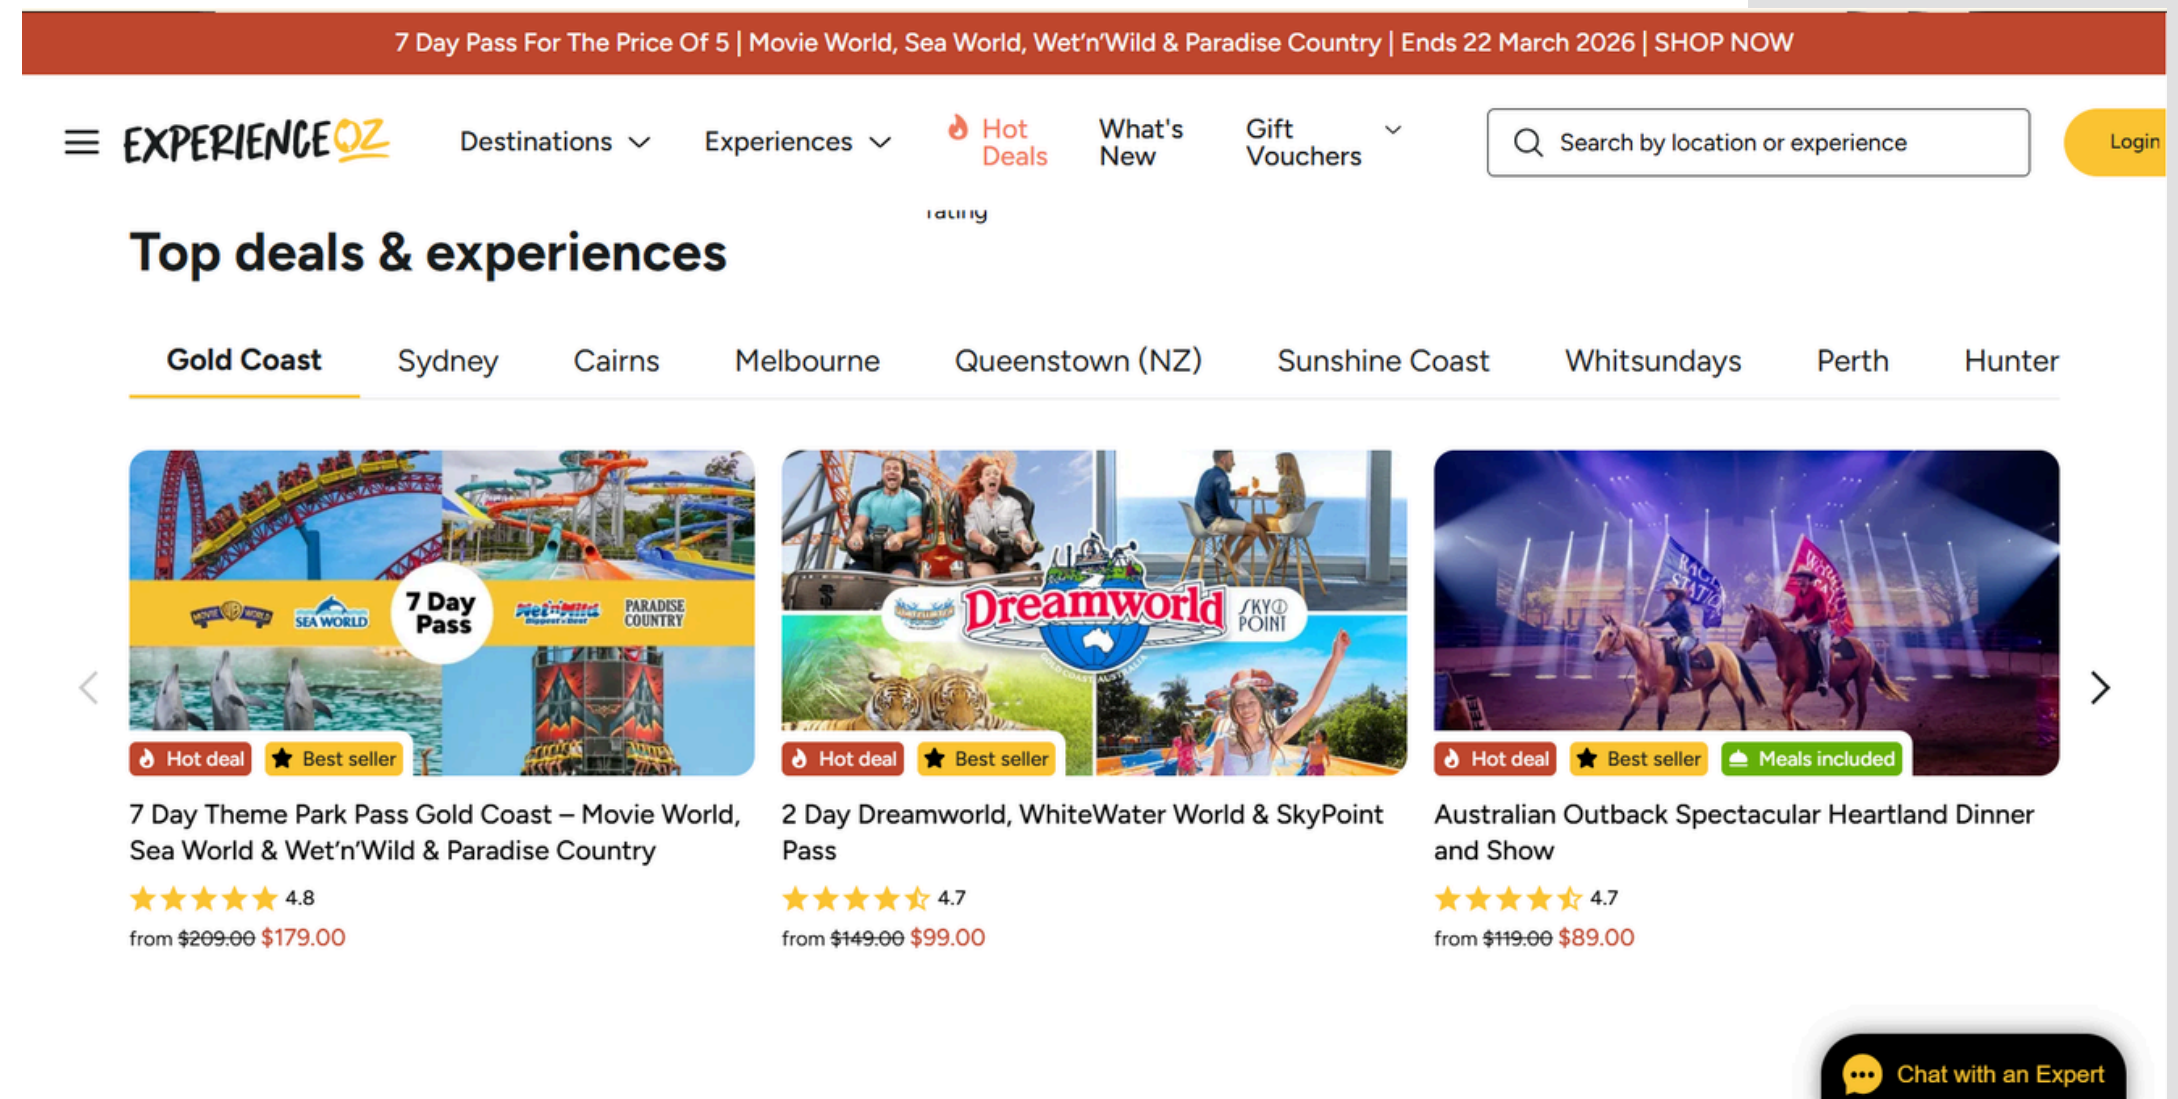

# Ticket

Exoz (Experience Australia)

Client : Australia  
Project Duration : 4 Years

## Overview:

- Maintenance System along with Production Monitoring
- H2H Connection Partners
- Performance Optimization
- Build New, Modern and Reactive Gateway
