Dear Hiring Manager,

I am a Senior Java Developer and Backend Team Leader with 10+ years of experience designing and shipping high-traffic backend systems across online betting/casino, travel, and enterprise platforms. I would be glad to bring this experience to your team, whether the role is hands-on backend engineering or technical leadership.

Most recently, at PrimeBase I built a high-load casino platform end-to-end on AWS using Java 21, Spring Boot, Kafka, Redis and Elasticsearch — defining the architecture, completing third-party casino and sportsbook integrations, tuning Kubernetes for production scale, and supporting the system live. Since January 2025 I have been leading the backend team, owning architectural decisions and partnering closely with Product, QA, Business and DevOps. Earlier in my career I led monolith-to-microservice transformations at Bilyoner and Etstur, two of Turkey's largest consumer platforms.

I am open to relocation for the right opportunity and comfortable working remotely or on-site across time zones. I would welcome the chance to discuss how my background fits your team's needs.

Sincerely,

Ugur Cetin
