Python Backend Developer with 4+ years of hands-on experience building real-world systems, including fintech solutions, Telegram bots with full business logic, and SaaS-style platforms.

Experienced in designing backend architecture from scratch, building APIs with FastAPI, working with asynchronous stack (asyncio, SQLAlchemy), and integrating external services such as payment systems, crypto APIs, and third-party providers.

Strong focus on delivering practical results — from idea to production-ready solution — rather than just writing code.

Education and Qualifications

CNC Machine Operator (Technical Education) Sep 2020 - Jul 2021
Brest State Technical College, Brest, Belarus

Developed a strong foundation in technical thinking, precision, and process-oriented problem solving.

These skills contributed to a transition into software development and backend systems.

Work experience

Python Developer Jul 2020 - Sep 2023
Zerocoder.com, Remote

- Developed Python scripts for automation (data processing, integrations, internal tools)
- Built parsers and crawlers (BeautifulSoup, requests, Selenium)
- Worked with REST APIs and JSON integrations
- Developed backend components and simple web applications (Flask / FastAPI)
- Worked with databases (PostgreSQL, SQLite)
- Adapted quickly to client requirements and delivered practical solutions
- Optimized data processing and parsing performance
- – Delivered end-to-end solutions from idea to working product

Python Developer Sep 2023 - Oct 2024
Citron Dev, Remote

- Participated in backend development of a product using Python
- Designed and implemented REST APIs (FastAPI)
- Worked with asynchronous stack (asyncio, SQLAlchemy)
- Integrated external services (payments, APIs, third-party systems)
- Contributed to application architecture design
- Optimized performance and data processing
- Worked on a product with real business logic and system-level thinking
- – Involved in development from scratch and product growth

Python Backend Developer (Freelance) Sep 2024 - Present
Self-employed, Remote

Working on freelance and personal projects in backend development, automation, and fintech solutions.

- Developing Telegram bots with full business logic (FSM, payments, admin panels)
- Integrating third-party APIs (crypto, payment systems, external services)
- Building backend services using FastAPI and async architecture
- Creating automation tools and data processing solutions
- Developing and testing own products (SaaS / fintech / crypto)
- Using Go (Golang) for high-performance services and concurrent workloads
